

**NO ONE
"RACKS UP"
IN STRENGTH
AND
SERVICE!**

At AWP Industries, we know not all applications are the same. Some of the heaviest requirements are the most costly and necessitate the upmost care and attention. For those special applications in storage, line-production, and shipping, contact AWP's American Bulk Container division! AWP can design and manufacture **RETURNABLE RACKS and CUSTOM CONTAINERS** for your special needs.

Returnable Racks & Custom Containers

AWP Industries, Inc.'s American Bulk Container (ABC) division specializes in unique storage and shipping applications. ABC's in-house design team can assist you in determining your packaging needs through 3-D design technology.

This design technology reduces trial and error style prototyping by creating a virtual prototype that can be reviewed and "fine tuned" before the physical container is produced. ABC will manufacture for the correct size and functionality.

Importantly, your product will be held securely if transporting over the road or while in the warehouse moving from assembly line to another line or to storage.

Above: Instrument panel rack.

Ten reasons why American Bulk Containers' Returnable Racks and Custom Containers stack up like no other:

- ABC's in-house design team assists in determining your exact needs by utilizing 3-D part files to and from different design platforms and translating into your desired format.
- Experienced container manufacturing and weld team (*wire mesh containers, corrugated-steel bulk containers, and returnable racks*).
- Three (3) assembly lines for racks and containers.
- Consistently strong, automated welds due to use of robotic weld cells in production of most container and rack bases and end frames.
- For corrugated applications, CNC Press Brakes automatically advance gauging from one corrugation to the next which increases productivity, lessens costs, and increases accuracy.
- Advance design and exportation into a CNC plasma center for immediate product creation.
- Press brakes for forming products.
- Automated equipment enhances ability to meet strenuous production delivery times.
- Large shear equipment for cutting or re-shaping (if necessary).
- Ability to produce corrugated sides up to 120" length.

RRACK-V2-10/07

Some options for ABC Returnable Racks or Custom Containers include:

- Foam pads for protection during storage and shipment.
- Cable operated latches, locking product in place and preventing accidental openings.
- Gas springs for a slow, safe release of product and to enhance ergonomic value
- Low profile bases.
- Expanded metal floors.
- A variety of colors.
- Plastic inserts.
- Targets, plugs, and many other stacking mechanisms.

A unique part of the American experience

AWP combines world class design, engineering, and prototype with world class manufacturing and quality. Although AWP products vary from wire mesh decking to metal stampings and then to returnable racks and custom containers, AWP's quality does not waiver. Whatever special need you have, let AWP give you the special attention to ensure your product satisfies your application and the highest standards. It is AWP's pleasure for you to be a part of the 'American experience'!
